

# FUHR Door Locks

## 856 Type 4, Type 8

- Reversible latch and deadbolt
- Variable handle height – supplied at 1020mm
- FUHR silver corrosion resistant surface finish
- Profile related locking plates
- Lever operated door locks

FUHR multisafe multipoint door locks are renowned for their ease of use, reliability and durability. Profile specific keeps ensure secure fastening to the outer frame. Lever/Lever action is a very simple means of operating a door lock – when the door is unlocked by the cylinder, depress the lever to release all locking points. On closing, lift the lever to engage the main locking points then turn the key in the profile cylinder to throw the central deadbolt and to deadlock all other locking points.

The Type 8 features two round deadbolts and two roller cams, giving secure locking, the tapered round bolt nose ensures easy operation and good weatherseal compression. Where security is a greater concern on main residential doors, the Secured by Design accredited Type 4 with four hook locking is recommended. The hooks engage into pressed steel profile related locking keeps.
