

Handle jig

**Step 1**

Firstly, determine the distance from the top of the door where the first hole is required.

**Step 2**

Then determine the distance from the side of the door where the first hole is required.

**Step 3**

Using either a 2 mm pilot drill bit or an awl, mark the door where the first hole is required.

**Step 4**

For a standard hole centre, simply read off the scale the desired hole centres and mark the door with the position of the second hole.

**Step 5**

The jig is now set up for all doors in the kitchen and each door can quickly be marked out ready for drilling.

- > Simple jig which accurately marks out door and drawer fronts in preparation for fixing handles and knobs
- > Green/black plastic - colour may vary
- > Order qty: 1 pc
